Boulder County
Railroad Quiet(er) Zone Project

December 7, 2016
Quiet Zones are locations that a railroad crosses a road, where FRA approved enhancements have been constructed that allow a conductor to not sound their train horn.

All quiet zones must have:

1. Minimum length of ½ mile between crossings
2. Active Grade Crossing Warning Devices (flashing lights, bells, etc.)
3. Compliant Warning Signs
What are Quiet Zones?
(Supplemental Safety Measures)

Four-Quadrant Gate System:
What are Quiet Zones?
(Supplemental Safety Measures)

Gates with Channelization Devices or Raised Medians:
Wayside Horns:

1. Requires ongoing maintenance
2. Of the two installed in Colorado, one has major technical issues
3. Software issues leading to poor communication between technologies
4. More suitable for areas with commercial and industrial land uses (it is still loud)
5. FRA can withdraw the quiet zone status if the horn does not work properly
Quiet Zone Rule:

- Established in 2005 by the Federal Rail Administration (FRA)
- Last updated in 2006
- Rule was in response to a nationwide study
- Allowed FRA to establish rules for Quiet Zones
Denver Regional Council of Government (DRCOG) allocated one time funding in the fall of 2016.

Funding is earmarked for this project and cannot be used for other purposes.
Crossings in Unincorporated Boulder County

- 83rd St.
- 2nd St./Main St.
- Niwot Rd.
- Monarch Rd.
- N. 55th
- Jay Rd.
- Independence Rd.
Other Municipal Efforts: City of Boulder

- 63rd Street (Gunbarrel)
- 47th Street
- Valmont Road
- Pearl Parkway
- 55th Street
- 63rd Street (Near Naropa)
Other Municipal Efforts: Louisville & Lafayette

- Baseline Road
- South Boulder Road
- Griffith Street
- Pine Street
### Boulder County Available Funding:

The Cost to Construct Quiet Zones Typically ranges from $200,000 to $550,000 apiece.

Boulder County does not have adequate funding to improve all crossings in our jurisdiction.
Boulder County Approach to Analysis

Use mapping software to determine number of residences currently impacted by train horn noise

Quantify the noise reduction for each residential parcel under various implementation scenarios

Select implementation scenario with maximized benefit to the public
Sound clouds estimate decibels of sound emanating from the train horn.

**Categories:** 65–70dBs, 70–75dBs, 75–80dBs, 80–85dBs, 85–90dBs and >90dBs

**Parcels used:** residential, residential land, apartments, bed and breakfast, manufactured home, mixed use

Apartments and mobile home parks quantified as one parcel.
For every 10 decibels, loudness doubles
How loud is it?

Winter 2016/2017
- Select crossings for design
- Contracting with CDOT for funding

Spring 2017
- Begin design
- Second public meeting to present crossing treatments
- Coordination with BNSF, PUC, CDOT, City of Boulder

Winter 2017/2018
- Begin construction (may depend upon other agencies)

Fall 2018
- Project completion
- Funding reimbursements

City of Boulder
- Mid 2017–2018, selection and design of crossings
- 2018–2019 construction
- Public Meeting: Thursday Dec. 15th, 5–7pm Boulder Chamber
What else should we be thinking about?
Thank you!
