

## Zoonotic Disease Report August 7 – August 13, 2016 (Week 32)

### Executive Summary

- Three WNV positive cases have been identified in Boulder County - a 74-year-old Lafayette woman, a 47-year-old north Boulder man, and a 13-year-old Longmont boy.
- CDPHE reports 13 WNV cases and one death statewide.
- While total mosquito counts remain near average, *Culex* mosquitoes remain above average for this week. Based on risk calculations, an elevated risk of WNV transmission is present in the Longmont area, however, risk remains present countywide.
- CDC reports 139 human cases nationwide from 27 states with one death (Colorado).
- Three bats and one raccoon were submitted for rabies testing, all testing negative.
- No specimens were submitted for plague, tularemia or hantavirus.

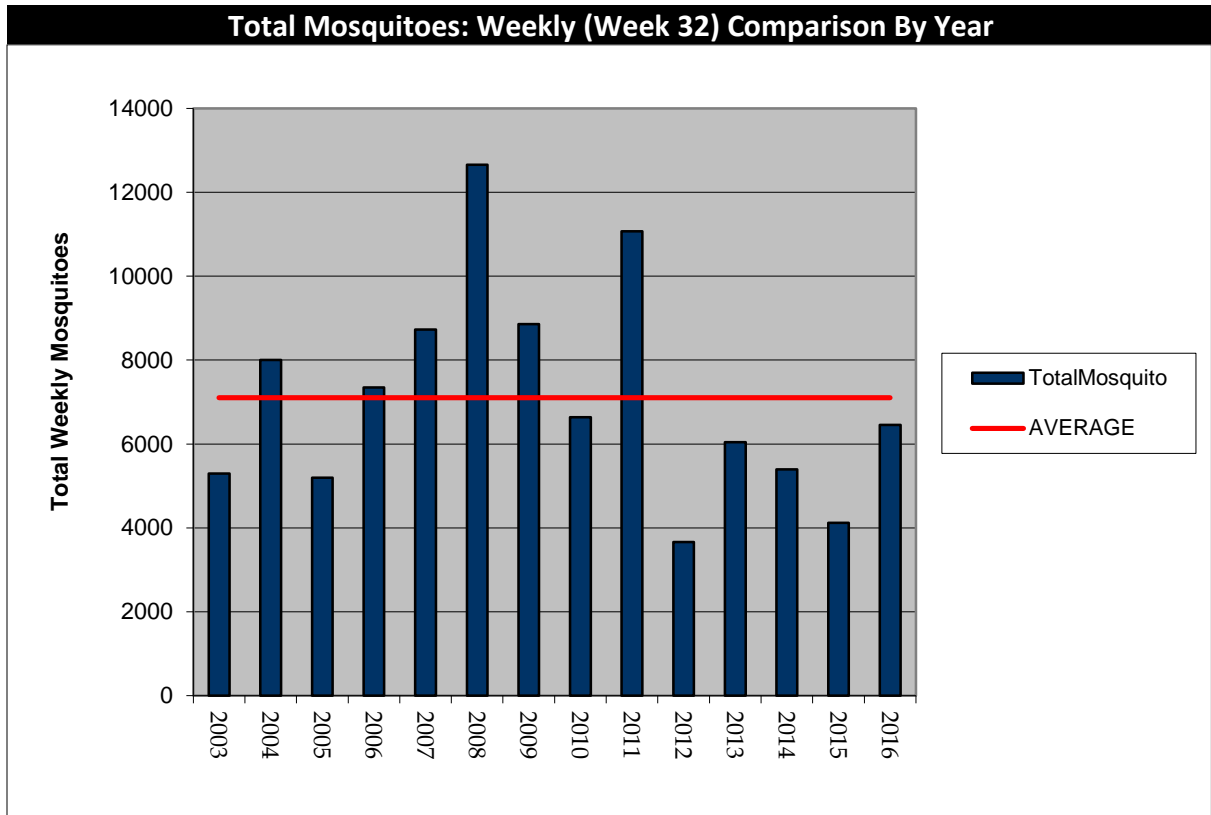

Information about symptoms, transmission, and prevention is always available at [BoulderCountyVector.org](http://BoulderCountyVector.org)

### West Nile Virus (WNV) Activity

SEASON-TO-DATE HUMAN WEST NILE VIRUS (WNV) ACTIVITY			
Location	Non-Neuroinvasive Disease Cases	Neuroinvasive Disease Cases	Deaths
<b>Boulder County</b>	3	0	0
<b>Colorado</b>	9	4	1
<b>United States</b>	76	63	1

NOTE: Numbers in red signify an increase from the previous week.

# Mosquito Activity

## West Nile Virus (WNV) Vector Index

The vector index is a function of calculated infection rate, adjusted for *Culex* mosquito population size, within a given area. It is used to estimate human West Nile Virus (WNV) transmission risk. A vector index of **0.75** or above in Boulder County is an indicator of high risk for WNV transmission to humans, and influences the Mosquito Control District's adult mosquito emergency control measures. A vector index is calculated for [three monitoring zones in Boulder County](#).

**NOTE: (\*\*\*) indicates that every pools submitted for that zone tested positive, therefore an infection rate and vector index for that zone cannot be calculated.**

## Animal Disease Activity

Each week, Boulder County and municipal Animal Control Units responds to animal complaints throughout the county. When deemed necessary, these specimens are sent to state laboratories for zoonotic disease testing.

### Caveats

- Data are provided from the Colorado Department of Public Health and Environment (CDPHE) Zoonotic database and may not include samples submitted for testing prior to publishing of this report.
- Data reflect samples submitted by Boulder County Public Health and may not include samples submitted by other agencies or private veterinary practices
- ‘Positive Vectors’ include only samples that have tested positive. Some samples submitted may be deemed untestable.
- ‘Submitted Vectors’ denoted with (\*) indicate that at least one sample was untestable. Untestable samples may be treated as positive for follow-up protocol.
