

Zoonotic Disease Report June 04 – June 10, 2017 (Week 23)

Executive Summary

- Statewide 66 specimens have tested positive for rabies in 2017 including two domestic dogs in Yuma and Weld Counties. This compares with 88 total positive specimens in 2016.
- 2017 Colorado rabies positive specimens: Skunk (48), Bat (11), Dog (2), Fox (4), Coyote (1)
- Full mosquito inspection and surveillance began this week.
- Mosquito traps counts for are above historical averages for this week.
- Testing of mosquitoes for WNV will begin next week.
- Two bats and one raccoon were submitted for rabies, all testing negative.
- No specimens have been submitted for plague, tularemia, or hantavirus testing.

Information about symptoms, transmission, and prevention is always available at BoulderCountyVector.org

West Nile Virus (WNV) Activity

Mosquito Activity

West Nile Virus (WNV) Vector Index

The vector index is a function of calculated infection rate, adjusted for *Culex* mosquito population size, within a given area. It is used to estimate human West Nile Virus (WNV) transmission risk. A vector index of **0.75** or above in Boulder County is an indicator of high risk for WNV transmission to humans, and influences the Mosquito Control District’s adult mosquito emergency control measures. A vector index is calculated for [three monitoring zones in Boulder County](#).

NOTE: (*) indicates that every pools submitted for that zone tested positive, therefore an infection rate and vector index for that zone cannot be calculated.**

Animal Disease Activity

Each week, Boulder County and municipal Animal Control Units responds to animal complaints throughout the county. When deemed necessary, these specimens are sent to state laboratories for zoonotic disease testing.

Caveats

- Data are provided from the Colorado Department of Public Health and Environment (CDPHE) Zoonotic database and may not include samples submitted for testing prior to publishing of this report.
- Data reflect all samples submitted by Boulder County Public Health, other agencies or private veterinary practices.
- ‘Positive Vectors’ include only samples that have tested positive. Some samples submitted may be deemed untestable.
- ‘Submitted Vectors’ denoted with (*) indicate that at least one sample was untestable. Untestable samples may be treated as positive for follow-up protocol.
